

Electric Vehicle Charging Stations

We are pleased to offer electric vehicle charging in the park. There are 3 charging stations at Mt. Rainier. 1 station at Paradise Inn and 2 stations at National Park Inn.

Since their first commercial release in 1991, lithium-ion batteries have become an important technology for achieving low-carbon transportation systems.

The carbon emissions from producing and operating an EV are typically less than those of producing and operating a conventional vehicle. EVs in urban areas almost always pollute less than internal combustion vehicles.
